

## Investor Pitch Prep Guide

Inventors and entrepreneurs are constantly looking for ways to raise money so they can build or expand their ideas. Being able to clearly and concisely communicate your ideas to others is a valuable workplace skill.

As you prepare to pitch your amusement park ride idea to your potential investors, keep the following items in mind.

- Your pitch should be less than 3 minutes long.
- You should create multimedia components or visual displays to clarify information. This could include a poster, Google Slide, webpage, etc.
- Make sure you have completed the 3-D model of your amusement park ride.
- You should be able to clearly describe how you determined your ride's passenger safety height and size requirements (adult vs. child). Also include any other ride features which you designed to assist with passenger safety.
- You should be able to explain your ride's energy properties (kinetic, elastic potential, gravitational potential, electric potential, chemical and/or thermal energy as applicable).
- Make sure you have a clear explanation as to how your design incorporated and promoted local natural resources.

**Final Tip: Relax and have fun!**
